

Preface

2014 International Conference on Modern Economic Technology and Management (ICMETM 2014) has been held in Xianning in March 22-23, 2014. The aim objective of ICMETM 2014 is to provide a platform for researchers, engineers, academicians as well as professionals from all over the world to present their latest research results and development activities for the delegates to communicate new ideas face to face, to develop economy, improve the management level, and to find global partners for future collaboration.

During the conference, the organizing committee received many manuscripts on economic technology and management from different universities, research institutes and other companies. These papers discussed the current situation and existing problems on economic technology and management science, and explored the proper solutions and correct development direction. All significant papers were gathered in this conference proceeding, which is a primary achievement of ICMETM 2014.

In this conference proceeding, authors presented their research results and opinions on their own research field, which were not big breakthroughs for science but still made a difference. As we all known, large distances should be covered in small steps, so the progress which is made in the current stage is a necessary way to the final success. All papers in the proceeding are indispensable footstones of the buildings of science, which are the painstaking efforts the authors made.

However, it must be pointed out that there are still lots of thorny problems unsolved. On the modern economic technology and management, further researches should be made to seek for the final answer. At the same time, we should admit there will be some mistakes in the proceeding, which is trial and error in scientific research. The conference proceeding is not only the achievement of ICMETM 2014, but also the guidance of the Second International Conference on Modern Economic Technology and Management, which will be held in the next year.
