

Preface

The First International Conference on Information Technology and Career Education (ICITCE 2013) has finished with a perfect ending in September 30th, 2013. During the meeting, the organizing committee received lots of papers which have been published online by SHS Web of Conferences (EDP Science) and the conference proceedings have been printed by Asian Academic Press (AAP).

Although ICITCE 2013 made some achievements, there are still something unsolved in the meeting, and then the Second International Conference on Information Technology and Career Education (ICITCE 2014) was held in October 09th-10th, 2014 in Hong Kong. On the basis of ICITCE 2013, we made great progress. The participants discussed all kinds of vocational technologies and their application in daily life, the problems and countermeasures in career education and other related social problems. As a fruit of this international conference, all papers are collected in the *Proceedings II of ICITCE 2014: Social Research and Career Education of Contemporary China in 2014*.

However, it must be pointed out that errors are inevitable in scientific research, let alone in the conference proceedings. As time goes by, some theories in the two sessions mayn't adapt to the present society, so we should keep up with the rapid update of knowledge. The articles in two sessions just mirrored the temporal phenomena and put forward corresponding solution, which means we should still persist in making empirical study and seek truth from facts.

The proceedings is only a summary of scientific research in a period of time, more efforts should be made beyond the meeting itself.
