

# Using Deception Baked by Military Assets to Delay Transition from Western Hegemony to Multipolarity

**Abstract.** The period of colonial and neo-colonial domination of Anglophone and a bunch of other Western Europe countries is going to its very end. The collapse of Soviet Union by 1990 made possible the development of USA hegemony and with Eastward expansion of its military brunch NATO. In spite of human capital of EU it managed to become vassal to US, grace to incompetence and corruption of its leaders. In the modern era, powered by computer revolution, the economic gap between western Caucasian race dominated states and rest of the planet shrinks, and national “Brain Power” of each nation become the driving power for progress, prosperity and obvious for a multi-polar world. Confronted to this new reality, US makes extraordinary efforts to maintain its hegemony and status quo using the entire arsenal of political, economic and military assets, with disdain for morality or fairness for effectiveness reasons. In contradiction to a reasonable approach of the problem, understanding the roots of the difference in National Brain Power , and take necessary corrections, while integrating in the new world order as a smart power, US under military industrial stake holders pressure, decided to use its military assets, in which it invested \$1tn every year, and to push the world towards a path of the and destruction, at the opposite of the path of cooperation and development the new emerging powers are proposing, that for sure is prone to a bd finality, accelerating the decay of the “western civilization capitalist model.

## 1 Introduction

The end of WWII is marked by the occurrence and use of the destructive nuclear power made by LANL and deployed by August 1945 over Japan under an iffy motivation, followed by Russia in 1949, and other countries of the actual nuclear club. By 1955 the “Atoms for peace idea” appeared, as an incentive for nuclear nonproliferation, and NPT was signed and IAEA was established as an agency for cooperation, but mainly as a watchdog for preventing nuclear proliferation, as a tool to control planetary nuclear activities, and maintain the 1960s balance of power. Soon after the WWII “Cold War” started, because a repetition of the previous war between new economic and political blocks

was no longer possible due to presence of nuclear deterrence, and MAD (Mutual Assured Detraction) was the new most likely outcome.

The era of “proxy wars”, started, dominated by the US and western block that initiated or was involved between 2017 and 2022, in at least 23 separate 127e programs across the world, where U.S. commandos conducted war operation under the vail of counterterrorism. United States not only arms but also trains and provides intelligence to foreign forces, as doing in Ukraine these days. However, unlike the traditional foreign assistance programs which are aimed at building local capacity, the 127e partners are then dispatched on US-directed missions and target American enemies to achieve the country’s aims [1].

## 2 US decadence an incentive for trouble making at planetary scale

After the WWII end, US had a period of prosperity and growth, having the initiative in economic development and research. On economy and finance it took the monopoly, but soon realized that switching from gld baked coin to Fiat currency is the most advantageous as long as one has the capability of printing money. That helped a lot the financial system, developed on the concept of borrowing money, from other partners that intend to transfer and preserve their little wealth for the future, and are borrowing money to the rich countries buying bonds.

Since WWI to now, US dollar had a 99% decline in value against gold. Other reserve currencies such as the British pound and Japanese yen have done even worse. The yen has lost 99.98% of its value against gold in 100 years [2] as seen in Fig.1. This was a stimulus on borrowing more money, make expenses in ones interest on other person money, and devalue the currency as to return less value [3], where in Fig.2 one may see the evolution of US debt vs. GDP, which simply shows that US is basically incapable of paying back the debt and has to do something to get rid of it. EU after a period of conservationism and responsible financial operations abandoned this attitude following the US example. Finding reasons to avoid paying back the debt is one incentive for planetary scale trouble making.

## 3 Education decadence and “brain power” of rising economies

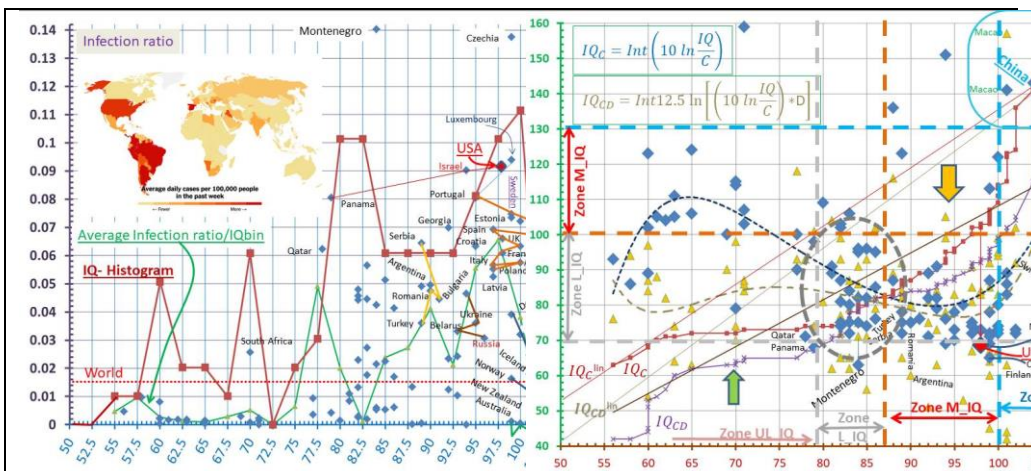

By the end of 2019 Covid appeared, spreading fast all over the world, nations exhibiting a wide range of responses in agreement with their IQ, moral values, politics and education. Simply said, covid and Trump removed the exceptionalism vail over American’s face,

putting all its deficiencies in lime light. It is mindboggling to realize that with only 4% of world’s population USA contributed up to 25% of world’s Covid’s casualties [4]. EU and almost Caucasian race s dominant ethnicity had record level casualties, without being possible to provide a good explanation. Most of the countries practically were unable to understand aerosolized propagation of a nano-entity, about 100 nm large and considered vaccination as the ultimate solution. The good lobby, big pharma had was a decisive advantage, making the governments sweep under rug, 50 years of experience and knowledge related to “pandemic control hierarchy”, and democracies become dictatorial, suppressing anybody which had different opinions.

Up t 2020 US and EU main stream media, was pretending as being independent and unbiased, in contradiction with accusations of “fake media” from right leaning politicians, but Covid pandemic and Ukraine war censorship finally proved that they are controlled by states, and are able to distort and reverse the truth, according to states agenda. War in Ukraine comes with another revelation, for the American public that is able to connect the dots or follow the money: prior to 2020 Trump withdraw from many nuclear and arms treaties, visioning a big business possible if US will produce and sale these weapons, but did not finalized the action. It came Biden’s turn, to take action, following a 2019 Rand Corp. Doctrine [5], pushing Russia in an unavoidable war with Ukraine, and making EU buy the weapons.

That made clear that the stakeholders of the military industrial complex and big-pharma own both parties that serve them first, no matter to whom the politicians paid allegiance. There is in fact a dictatorship disguised as a democracy, as Mayer Amschel Rothschild is credited with saying, “Permit me to issue and control the money of a nation, and I care not who establishes its laws.” However, the whole quotation reads as follows: “Permit me to issue and control the money of a nation.” This assertion is said to have been made in 1838, according to a variety of sources, including this one (which would have been a difficult feat as he would have been dead for 26 years by then).

The education evolution is deeply bound to the future of a nation, generically measured by its average IQ. But, how realistic is the IQ factor and how well it covers all the circumstances a population has to confront and thrive. Recent Covid pandemic was a harsh test for world’s populations and their IQ.
