Abstract. In the new era of China's development for higher vocational college students have new quality development requirements, especially in terms of ideological quality, college students in the new era are required to have patriotic feelings and practical action, correct overall view of world development, and conscious view of global ecological environment protection. At a higher vocational college in Anhui province for two months investigation and study of the topic, through the data analysis found that some problems existing in the college students in the new era of ideological quality development: some college students of level of concern for domestic event and domestic security is not high, and the patriotic practical actions need to be further improved; Some of them have a shallow understanding of the international situation, and the ideological quality of a few college students does not meet the requirements of The times; College students have nearly for ecological environment protection is the lack of action. It puts forward the corresponding countermeasures and Suggestions: Guiding the college students pay attention to the national development, and to the right side of thinking, actively safeguard national interests; Guiding the youth to learn to distinguish right from wrong, and form a correct global vision and the soul of thought; Through the education of higher vocational college students to learn ecological security concept of national overall security, enhance their awareness of environmental protection, ecological security and the ability to consciously maintain ecological security.

1 Introduction

The year 2022 marks the 101st anniversary of the founding of the Communist Party of China, the 111st anniversary of the Revolution of 1911, and the 51st anniversary of the restoration of China's lawful seat in the U. N.. The Communist Party of China led all the Chinese people from standing up -- we won the great victory of the new democratic revolution, established the new China and We won a great victory in the war of defending Korea against the United States to protect the country; The Communist Party of China has led the Chinese people in carrying out socialist construction and development, advancing reform and opening up, and carrying out a great campaign of targeted poverty alleviation. We Chinese people will continue to be under the great guidance of the communist party of China towards a stronger - China development entered the new era (the new era of socialism with Chinese characteristics), the first goal in one hundred (when the one hundredth anniversary of the founding of the Communist Party to build a well-off society in an all-round way) has been completed, the second hundredth year goal (during the one hundredth anniversary of the

founding to build our country into a prosperous, strong, democratic, civilized, and a harmonious and beautiful modern socialist country has been put into practice in China's social reality. Overall national security concept is a marxist concept and the latest developments of marxist national outlook, combined with China's actual social development, with Chinese characteristics, is a systemic seventeen safety as a whole, including national security and international security, the development of security and ecological security, global security and local safety and other important content ^[1]. Its contents deeply contain the ideological quality development requirements and ardent hopes of college students in the new era for the development of our country, because the overall national security view methodology is based on the "new three views": the correct view of history, the view of the overall situation and the view of role ^[2]. College students in China's higher vocational colleges should realize that China has entered a post-industrial society, that China needs blue-collar skilled workers with both ability and integrity, and that our society has entered a new era of socialism (on October 18, 2017, the 19th CPC National Congress that "socialism with Chinese characteristics has entered a new era"^[3].) In China's new era, the country's

^{a, *}E-mail: 1045808759@qq.com; ^bE-mail: 1194412826@qq.com

^cE-mail: 1257040620@qq.com; ^dE-mail: 542838130@qq.com

^eE-mail: 645490334@qq.com; ^fE-mail: yk15904908218@163.com

development needs more people with both high skills and high ideological and moral quality -- double high-tech workers, so for higher vocational college students have a new quality development quality requirements, in addition to learning their own professional theoretical knowledge, master the practical operation technical ability, especially in the aspect of ideological quality, requirements of the new era college students in higher vocational colleges should have patriotism deeply embedded in our genes and take concrete actions to safeguard China's national security, honor, status and interests. They should have a correct view of the overall situation of world development, keep an eye on international events, have the ability and sharp eye to distinguish right from wrong, and have a conscious view of global ecological and environmental protection. Higher vocational college students in the new era should have these ideological and quality development requirements, otherwise it is difficult to keep up with the pace of development in the new era.

2 Research methods and materials

Our team personnel mainly adopts network research methods in higher vocational colleges in China's Anhui

Table 1. The number and proportion of college students who choose whether to pay attention to domestic and international events.

Options	Subtotal	Proportion
A, paying attention to	1983	 89.61%
B, Don't pay attention to	230	 10.39%
Total valid data	2213	

Data source: primary data analysis data of research project.

(2) In the maintenance of national security, mainly through a set of three levels (cognitive emotion, behavior tendency, action) problem to research of college students in higher vocational colleges in the maintenance of the degree of China's national security, data analysis showed that: Select the first level (cognitive emotion) concern for national security are 1995 college students in higher vocational colleges, the percentage is 90.15% and 1811 people (81.83%). Choosing the second (behavioral tendency) level to know the importance of national security: There were 1442 college students (65.16%) who had

Table 2. The number and proportion of higher vocational college students-related options on national security

Options	Subtotal	Proportion
A, I care, I care about national security	1995	 90.15%

province a subject research for two months, finally compiled 2213 effective questionnaires for data analysis, the results showed that college students in higher vocational colleges have some problems in ideological quality, then puts forward the corresponding countermeasures and Suggestions.

3 College students in higher vocational colleges have the following problems in ideological quality

3.1 The level of concern about domestic events and domestic security is not high

(1) When college students in higher vocational colleges are asked whether they have paid attention to major international and domestic events recently, the data analysis results show that 230 college students have not paid attention to major events at home and abroad recently, accounting for nearly 10.39%. Such as:

mastered behaviors to safeguard national security. There are 1793 college students who choose the third level (practical action) to actively oppose acts endangering the state, accounting for 81.02%, and 1471 college students who choose to actively participate in safeguarding national security, accounting for 66.47%. We can find that in the second level (behavior tendency) and the level of the third important (action), the number of cases is relatively low, that the college students in higher vocational colleges in the maintenance of national security (behavior and action) is the need to further strengthen. Such as:

B, I know, I know about national security	1811	 81.83%
C, I master, I master how to keep our country safe	1442	 65.16%
D, I am involved, involved in safeguarding national security	1471	 66.47%
E, My position is to actively oppose acts endangering national security	1793	 81.02%
Total valid data	2213	

Data source: primary data analysis data of research project.

(3) Network security is also very important in national security. When respondents were asked what they would do if they saw online language that could harm our national security? The results showed that 54 students chose to be bystanders, and even 11 students chose to agree and speak with them, regardless of the interests of

national and ethnic development! As shown in Table 3. In fact, the network security of a country is also of vital importance. Each of our college students should fight back favorably when they see comments attacking our country on the network, and actively defend the interests of our country and nation.

Table 3. The number and proportion of college students who choose the attitude towards the verbal attacks on our country

Options	Subtotal	Proportion
A, Against, give a strong response	2148	 97.06%
B, Look on	54	 2.44%
C, Agree and say it with them	11	 0.5%
Total valid data	2213	

Data source: primary data analysis data of research project.

(4) Sea, land and air are the main positions of national security respectively. China's Shenzhou 13 spacecraft, carrying three Chinese astronauts Zhigang Zhai, Yaping Wang and Guangfu Ye successfully blasted off on Oct 16, 2021, and landed successfully at 9:56 PM on April 16, 2022^[4]. The successful launch of Shenzhou 13 space-

craft is the glory of Chinese science and the pride of all Chinese people. Every university student should pay attention to this matter. When vocational college students were asked if they had been paying attention to the Shenzhou 13 spacecraft recently, the results showed that 378 students had not. Such as:

Table 4. The number and proportion of people who choose whether to pay attention to Shenzhou 13 spacecraft

Options	Subtotal	Proportion
A, Paying attention to	1835	 82.93%
B, Don't pay attention to	378	 17.07%
Total valid data	2213	

Data source: primary data analysis data of research project.

(5) Space is another key areas of science and technology of various countries competition today, it is very important to the development of country, China's space construction contains profound space spirit, for the college students in higher vocational colleges is necessary to know the affairs of state, especially in China's construction of outer space, to keep the heart in the development of country and nation in the future, study well space and great spirit China's craftsman spirit: the spirit of continuous endeavor, unity, excellence, meticulousness and so on. The construction of China's space station brings great confidence and pride to every Chinese.Planned Space

station system in the People's Republic of China: The planned space station system in the People's Republic of China is expected to be completed around 2022, with an orbital altitude of 400 to 450 km, an inclination Angle of 42 to 43 degrees, a designed life of 10 years, a long-term residence of three people, and a total weight of 60 to 180 tons for large-scale space applications^[5]. Have you been paying attention to the construction of the Chinese space station recently? According to the survey data analysis, 606 college students chose not to pay attention to the construction of China's space station, accounting for 27.36%. Such as:

Table 5. The number and proportion of higher vocational college students who choose whether to pay attention to the construction of China's space station

Options	Subtotal	Proportion
A, Paying attention to	1607	 72.64%
B, Don't pay attention to	606	 27.36%
Total valid data	2213	

Data source: primary data analysis data of research project.

After the scientific analysis of survey data found that some college students of vocational colleges attention to domestic affairs and domestic security level is not high,some college students in the maintenance of national security the second and third level: (behavioral tendency) and (actual action) need to be further improved; Table 4 and Table 5 show that higher vocational college students pay insufficient attention to China's space industry and space station construction.

tions, which runs counter to the fundamental interests of the two peoples and the common interests of all countries in the world ^[6]. In fact, America should be soberly aware that harmony between China and the United States benefits both sides, while confrontation harms both sides ^[6]. China and the America should always maintain mutual respect and pursue mutually beneficial and win-win development, so that the whole world can achieve better development. At the meeting between China and the American on March 18, 2021, American negotiators made incorrect moves and wrong expressions ^[7]. Yang Jie-chi strikes back favorably on the spot, which well maintains the national security, honor and interests of our country ^[7]. Have you been following the recent talks between China and the United States? Data analysis shows that the proportion of college students who are not concerned is 22.6 percent. Such as:

3.2 The level of understanding of the international situation is low, and a small number of college students' ideological quality does not meet the requirements of the development of The Times

(1) For some time now, the American policy towards China has caused serious difficulties in China-USA rela-

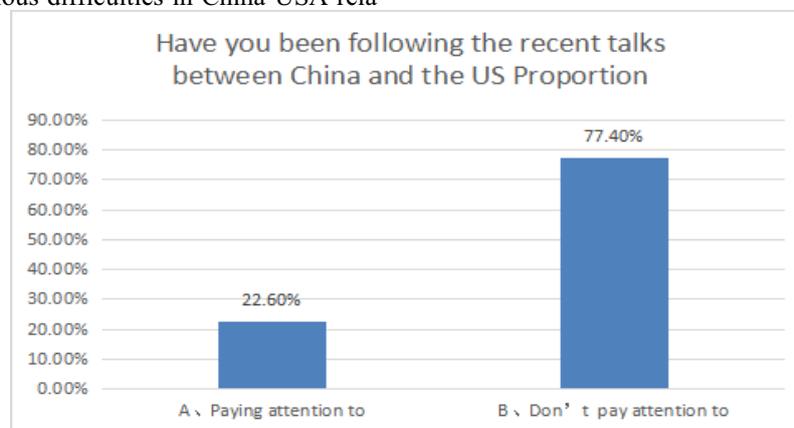

Fig. 1. The number and portion of students who chose whether toto pay attention to the meeting between America and China (March 18, 2021)

(2) In March 2021, some Western countries and companies fabricated fake events to attack the cotton incident in Xinjiang [8]. When college students in higher vocational colleges were asked about the United States and some western countries and companies fabricating false events to attack the cotton incident in Xinjiang, what is your attitude? The results showed that 25 of them were neutral, and 13 of them were in favor! The combined ratio is about 1.72%, as shown in Figure 2. In the new era of

China, we need more young college students in higher vocational colleges to safeguard the national security and honor and interests of our country. When the youth prosper, the country thrives, and when the youth are strong, the country will be strong. Only when the young generation has ideals, responsibilities and struggles, can China have a future and the national development will be hopeful. The 38 vocational college students' choice attitude is not in line with the development of The Times. Such as:

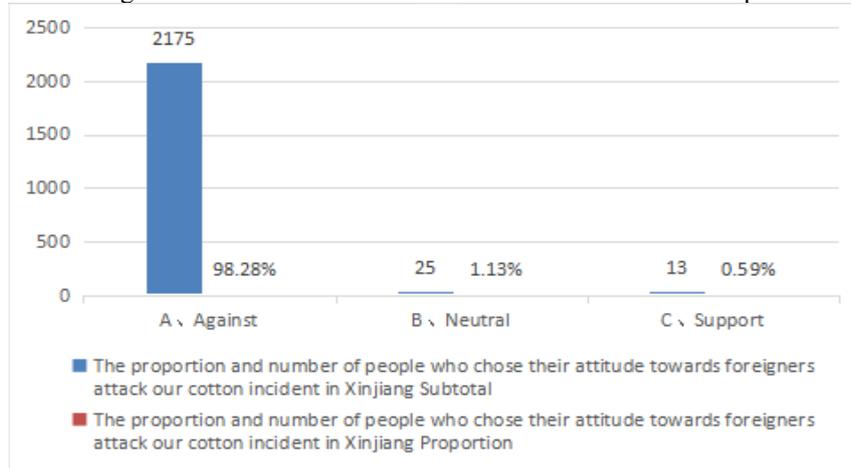

Fig. 2. The number and proportion of higher vocational college students who chose to view Western countries and relevant companies fabricating lies to attack China's cotton incident

The analysis of the above survey data shows that some college students in higher vocational colleges still need to further improve their attention to international events, and nearly 20% of them do not pay attention to important international events. There is a certain deviation in the understanding of the international situation. A small number of vocational college students (nearly 2%) are difficult to defend China's national interests with their own practical actions, and cannot correctly distinguish right from wrong. They do not meet the requirements of the development of The Times, and are difficult to bear the responsibility of the development of The Times.

3.3 There is a lack of practical actions in ecological and environmental protection.

(1) Waste batteries, used mobile phones and so on belong to electronic waste, which will do serious harm to the environment if not properly disposed of it. In the PCBs chlorine generation of electronic waste dismantling waste, the mass fraction of low chlorinated biphenyls from trichlorobiphenyls to Pachlorobiphenyls accounted for the most, accounting for 77.92%, 59.73% and 73.96% respectively, which was far higher than the normal acceptable range of human body [9]. When respondents were asked do you know the dangers of e-waste? Data analysis shows that 73 college students choose not to know the harm of e-waste, accounting for 3.3%. Such as:

Table 6. The number and proportion of students choose whether to know the harm of e-waste

Options	Subtotal	Proportion
A, Know	2140	96.7%
B, Don't know	73	3.3%
Total valid data	2213	

Source: Primary data analysis of the research

(2) Every college student should take action after eating, because the arable land on the earth is limited, and it is very hard for farmers to cultivate, and these cooked meals are at least made into finished products for people

to enjoy after several procedures. When asked you as a college student, can you clear your plate campaign? Data analysis shows that 92 college students did not clear their plates campaign, accounting for 4.15%, for example:

Table 7. The number and proportion of college students choosing whether to clear your plate campaign or not

Options	Subtota	Proportion
A, Can	2121	95.85%
B, Can not	92	4.15%
Total valid data	2213	

Source: Primary data analysis of the research

(3) Every college student in higher vocational colleges should be able to correctly classify garbage. When asked, can you classify garbage correctly as a college

student? Data analysis shows that 126 college students choose to fail to account for 5.71%.for example:

Table 8. The number and proportion of college students choosing whether can correctly classify garbage or not

Options	Subtotal	Proportion
A. Can	2087	94.29%
B. Can not	126	5.71%
Total valid data	2213	

Source: Primary data analysis of the research.

Based on the above data analysis, it is found that some college students in higher vocational colleges (about 3% to 6%) lack of practical actions in ecological environmental protection, and cannot consciously implement the requirements of ecological security thought in the overall national security concept.

4 Put forward the corresponding measures and opinions

4.1 Guiding the college students pay attention to the national development, and to the right side of thinking, actively safeguard national interests

Every teacher in higher vocational colleges can perfectly integrate the excellent culture and history of the Chinese nation into the curriculum. College students bear in mind that China is a country with more than 5,000 years of excellent cultural history. Rich and colorful cultural connotations contain the root and soul of our nation, which is worth the teachers of every subject drawing lessons from their own courses. In the excellent cultural history of China, there is a great spirit of our nation, such as: loving the motherland, sacrificing oneself for others, selfless dedication, arduous struggle, and unity, and other spiritual qualities have a long history in our national culture. Higher vocational college students to keep in mind that China is one of the four great ancient civilizations, is also the only culture is no fault of the world's ancient civilizations, bear in mind that China historically has been carrying out the peaceful development of the country, the Chinese are all in the genes of the Chinese nation and his bones for peace, integrity, harmony in diversity, these

early recorded in our ancient Chinese Confucius culture, A prison Remember that China is a country with a long history and a long vision. China has the right and responsibility to make its voice heard to the world. China is a young country full of hope and vitality, which deserves the respect, trust and learning of the whole world. At the same time, ideological and political teachers and counselors in higher vocational colleges should guide the young students to firmly believe that no organization or individual can stop China's development and progress, and the dream of the great rejuvenation of the Chinese nation will surely come true. Our great motherland has come to this day because the Communist Party of China has led all the Chinese people to experience the ground-breaking great cause of national salvation, which has brought about earth-changing new changes in China and made great prosperity. We will continue to achieve the giant dream of a strong country under the leadership of the Communist Party of China. College teachers should educate each of our college students (all members) whenever and wherever, we must love our great motherland, do a Chinese children of indomitable spirit, and will be deeply rooted in the patriotic feelings in our national genes, the soul of our nation, from generation to generation.

Today's China is a country that the whole world should respect and learn from. College students in higher vocational colleges must understand the development of the country, treat the national affairs in a correct way, and care about and love the future development of their country. Now we after industrial development stage to the development of the whole country, having both ability and political integrity of the need for more young technical workers, mainly in higher vocational colleges, is the place of training technical talents, trained technical personnel having both ability and political integrity to

make more contribution to the national development and to realize the great rejuvenation of the Chinese nation to make more tribute to the development of construction of the Chinese dream Offer. College students in China's higher vocational colleges must pay close attention to the major issues of China's development, because people living in this country and nation should have a basic understanding of their own national affairs. The teachers of ideological and political courses in higher vocational colleges should clarify the fundamental problem of who we train people for, how to train people and for whom^[10]. Students in higher vocational colleges should be strictly required, and those who fail to meet the course learning standards should retake the course, so as to promote all students in higher vocational colleges to meet the standard of ideological and political courses. Related media to reduce adverse information push development of college students, strengthening of the youth in higher vocational college students in learning and learning power, for the good of teenagers for the long-term development of information push for higher vocational college students know more about the development of the country, have more national development trend, strengthen the feelings of love for the motherland and a sense of national pride and self-confidence, and guide the higher vocational school The university students should believe in the Communist Party of China, because to achieve the great rejuvenation of the Chinese nation, we must have a strong force to lead the Chinese people forward, and this strong force is the Communist Party of China^[11]. Teachers in higher vocational colleges should integrate the latest national development events into the curriculum, guide the majority of young college students to learn professional and technical knowledge, but also pay attention to the national development events, enhance students' national identity and pride. For example: the space development of China is the pride and pride of our Chinese nation. Teachers in higher vocational colleges can introduce our country's space development and the latest science and technology award winners into the classroom. At the same time, teachers in higher vocational colleges should teach students how to properly safeguard national interests, and college students should timely maintain the safety, honor and status of their country, keep state secrets, abide by laws and regulations, and become virtuous and talented people whether in real life or on the Internet.

4.2 Guiding students to distinguish right from wrong, and encourage them to form a correct global and cosmopolitan vision and soul of thought

"What is true, good and beautiful, what is false and ugly" must be in the world outlook to educate our next generation of young people. In each semester's Situation and policy course, teachers must guide students to learn about the relations between great powers and the current situation of world development, especially the relationship between China and America. The relationship between China and America is a must^[6]. The world benefits from

generations of friendship between China and the United States, while the world suffers if China and the United States fight^[6]. Now the world is facing many problems for development, such as global economic development waiting for further recovery, the impact of novel coronavirus epidemic, threats from traditional and non-traditional security, global climate change and other global problems. All of these need to be actively involved in global each country, common governance, solve common problems existing in the world, need every country government workers should have long-term perspective of the development of the world, around the world, at the same time in order to long-term development needs of each country teachers should actively guide teenagers when education teenagers with global vision and perspective of historical development. Only by way, sustainable global development and peaceful development of all countries can be achieved. In terms of the development of current state relations, every teacher in higher vocational colleges should guide our Chinese college students to correctly understand current international relations. Our country, China, in the long history of human development, has made great contributions to the politics, economy, economy and culture of the world. We, China, put forward the Belt and Road Initiative, and advocate that other countries join hands in peace and common development. China has long put forward the idea of building a community with a shared future for mankind. Through sincere and concrete actions, we are constantly promoting the common development of all countries in the world. However, there are always some countries that are arrogant, hyping up differences in ideology and political system in the international community, and trying to create a "clique" and create division^[12]. Often sabotage in some western countries, led by the U.S. government to help other countries develop on the surface, in fact often across the United Nations, in violation of the provisions of the international law, depress and resistance to the development of other countries, interfere in the political development, and even to other countries make some war, disturb the order of development around the world, the world is not peaceful. For example, some developed countries, represented by the United States, do not want to lose the dominance and control of the international system. They frequently use their monopoly of financial and scientific power to contain developing countries and adjust international economic and trade rules to protect their own interests^[13]. Even some confused Western governments insult and slander countries that have made great sacrifices and dedication to fight the epidemic. What an absurdity! We human beings should always remember that life, health and safety always come first, freedom, equality and other rights come second, and these rights are zeros after one. Without one, no amount of zeros will be of any use. A truly responsible power should bring more peace to the world, not create war! A truly responsible big country is one that contributes to the world, not affects the normal development of other countries! China is one of the most responsible countries in the world and the Chinese government is one of the most responsible governments in the world. The US government should really reflect on its

own actions and cultivate the spirit of sacrifice and dedication among its youth, learn to truly respect the sovereignty of other countries and learn to truly realize that every country has the sovereign right to develop. China and the USA should always have good relations and jointly promote the development of the world. China have made great contributions to the world and will make more positive contributions to the world in the future.

4.3 College students in higher vocational colleges should learn the ecological security concept in the overall national security concept

Ecological security plays a very important role in the overall national security concept. Ecological safety is very necessary. The risk of ecological safety in China is not low. Colleges and universities should take ecological civilization thought and overall national security concept as guidance, practically promote ecological safety education, and make up the short board of ecological safety education [14]. Under the guidance of the overall national security concept, we should effectively promote ecological safety education and make up for the shortcomings of ecological safety education [14]. The course of environmental protection is indispensable in colleges and universities. Teachers in higher vocational colleges should enhance the awareness of environmental protection of college students and enhance the awareness of ecological security in the overall national security concept of Chinese college students. Teachers in higher vocational colleges should educate students to understand the global ecological and environmental problems in recent years. For example, the World Meteorological Organization reported in September 2019 that the global temperature is at least 1 degree Celsius higher than pre-industrial levels, which is close to the "unacceptable risk level" warned by scientists [12]. The global temperature is rising day by day, the temperature of the two regions of the earth is slowly rising, the earth's Antarctic and Arctic glaciers are slowly melting, bringing bad effects to the world's climate. Teachers should teach college students to think deeply if the earth's environment is seriously damaged, is there another planet or region suitable for us to live in? Do we humans have enough strength to migrate to other planets or regions? The earth is ringing the alarm bell again and again for mankind. It is also an important issue whether the space junk produced by human activities in space can be effectively managed. College teachers should encourage students to learn the ecological security thought and the community of human destiny in the overall national security concept, and at the same time encourage college students in higher vocational colleges to realize that some climate impacts have occurred in various regions of the world since 2021. For example, continuous rainfall has caused urban waterlogging in China, forest fires in the America, frequent typhoons and earthquakes in some areas, extinction of some endangered species, and severe dry weather in some areas. Faced with these problems, we college students must realize that mankind needs to act together, because mankind as a whole is a community of human destiny, and

human destiny is linked together. Some foreign government organizations have advocated the formation of the so-called universal immune population and treated human lives as guinea pigs! Governments around the world should be to overcome together new outbreaks, the outbreak of global influence is too serious, the coronavirus is very terror, bring us very bad influence. The outbreak of some viruses around the world poses a threat to the survival of mankind. What level of Earth civilization have we reached? Will mankind be able to advance smoothly toward a higher civilization? People all over the world sincerely hope that America will not be the destroyer of global civilization. All mankind must unite to resist the novel coronavirus. Only by this way can the coronavirus be well controlled.

Human should have scientific and dialectical thinking at the same time, must think deeply can effectively control their production or synthesized material and made every science and technology, human beings in the use of the technology at the same time, to deep thinking about the disadvantages of hidden behind them, must try to avoid these disadvantages, otherwise have to eliminate and never use the science and technology. In their teaching, college teachers can introduce the thought of harmony between man and nature in Chinese culture and the real problem of waste disposal to educate college students in higher vocational colleges to take good care of the environment. At the same time, teachers of environmental protection courses must educate every college students should learn to love the earth we live on, usually try to reduce environmental pollution; To guide college students in practical action to save water and electricity, save food, shining disc needs our college students to act together. In the long process of development of human history, it is necessary for every young man to love the earth environment on which we live and protect our ecological environment. All vocational college students must take good care of the earth environment on which we live.

5 Conclusions

China's development has entered a new era (A New Era of Socialism with Chinese Characteristics), the first goal in one hundred (when the one hundredth anniversary of the founding to build a well-off society in an all-round way) has been completed, the two hundredth annual goals (during the one hundredth anniversary of the founding to build our country into a prosperous, strong, democratic, civilized, harmonious and beautiful socialist modernization power) has in social reality in China is practice, our country is carrying on the 14th a five-year plan. College students in China's higher vocational colleges should realize that China has entered a post-industrial society, that China needs blue-collar skilled workers with both ability and integrity, and that our society has entered a new era of socialism (On October 18, 2017, the 19th CPC National Congress that "socialism with Chinese characteristics has entered a new era" [3]). In the new era of China, what the country needs for development is more people with both high skills and high

ideological and moral quality -- double high-tech workers. Therefore, there are new quality development requirements for college students in higher vocational colleges. In addition to learning their own professional theoretical knowledge and mastering practical operation and technical ability, especially in ideological quality, college students in higher vocational colleges should have a correct view of the overall situation of the world development, the students should strengthen our national pride and confidence, deeply imprint patriotism in our genes, and safeguard China's national security, honor, status and interests with concrete actions. They should always pay attention to the international events, and have the ability to distinguish right from wrong and sharp vision. The higher vocational college students in the new era are required to have a conscious view of global ecological environment protection, and to enhance the awareness of environmental protection and safety to protect our ecological environment and protect the earth on which our human beings live. Only in this way can college students in higher vocational colleges in China truly assume the great responsibility of realizing the Chinese Dream and the responsibilities entrusted to us by global development and world development, promote the common development of the world, safeguard the common security of the world, and become blue-collar technical workers of high quality with both ability and political integrity that China needs.
